WE RESPECTFULLY REQUEST 24 HOURS NOTICE FOR CHANGES TO APPOINTMENTS.

NO SHOWS AND LATE CANCELLATIONS WILL INCUR A FEE.

PLEASE REFER TO THE CANCELLATION POLICY ON OUR WEBSITE.

Intense Pulsed Light, or IPL, progressive hair reduction is a laser treatment that targets the melanin of the hair to conduct a current to the hair bulb, weakening and destroying it, thus reducing your unwanted hair. Square IPL differs from other laser hair removal types because of the wide band of light rays that are used, providing greater efficacy of hair removal on a larger variation of hair and skin colours. Unlike other lasers, we can treat hair of any colour and on any skin colour. Our medical grade laser is the fastest on the market, delivering 3 pulses per second, and with an inbuilt cooling unit, your treatment is fast and painless.

Like electrolysis, the destruction of the hair bulb can only take place when a hair is in the active growing stage, Anagen; and as each of our hairs are not simultaneous in their growth cycle, it is necessary to treat the same area until all hairs have been eradicated, an approximate 8 treatments, but may vary from 3-21, dependant on hair strength and influent hormonal factors. A yearly touch up may be necessary. Our IPL unit is a TGA registered medical device with multiple levels of in-built safety and is used by a trained professional in hygenic conditions.
